P3 Tip Management Software

Anderson Software is the pioneer of tip management software and the developer of the new P3 Intel tip management application. P3 Intel is the industry's very latest and most intuitive and functionally advanced application of its type. Secure & anonymous information may be received from the public, managed and shared for investigation and further analysis with incredible ease and efficiency.

Dynamic User Interface – A new responsive design scales itself dynamically based on the screen size. Fully manage your tips via pc or tablet and even perform most admin functions on your smartphone.

Multi-Source - Easily receive and manage tips received via phone, web, mobile app and mobile browser.

Delivery - Seamless and immediate exchange and sharing of tips with your internal recipient accounts, other P3 accounts and recipient groups without the traditional push/pull E-transfer routines. Recipients are immediately notified of new or updated tips via email and SMS text notice.

Outbound Alerts – Send SMS and email alerts to recipients. Multiple recipient groups supported. Receive tips back.

Cross Checking - Automatic checks for the same names, aliases and addresses across all tips quickly finds other records with matching information.

Messaging - New enhanced communications capabilities between the programs and call centers, program to program and between programs and recipients at the record level.

New Modules - Modules to manage your Wanted Fugitives, Missing Persons, Crimes of the Week, Featured Crimes, News and Events for web and mobile display. *

Keyword Watch List – On screen alerts of any user-defined keywords present in the tip.

Raids Online - Seamless integration with the free Raids Online crime map product for tip submissions on mapped crimes. Further integration with other LexisNexis products under development.

Tip List View – Expanded primary tip list contains many more fields for more details at a glance. The list is also sortable and infinitely scrollable so no more paging through a small group of tips at a time.

Recipients – Much more information stored on each contact per recipient agency. Recipients also login now to view and work their assigned tips. They may update the tip disposition online now as well, updating the actual tip itself in real-time.

Detail Fields – User definable fields replace the old style popup templates. These custom entry forms are used internally and during web and mobile tip entries.

2-Way Replies – Multiple canned responses may now be pre-defined and easily selected to be inserted into the 2-way dialog box with a mouse click.

Flexibility – Tips from any source may now also be updated via any source. No need for any more 'Updated Info" tips from Call Centers that content must be copied out of and pasted into the original tip. This is very significant!

Audit Trail – Extensive auditing of all user interaction so you know exactly who did what, and when.

Mobile Apps – The public may submit tips with included images, video and documents and engage in two-way dialog with you along with viewing your Wanteds and dialing your hotline. Real-time chat and anonymous push-notifications fully supported as well.

Admin Mobile App – You can Review, update, reply to and deliver tips from anywhere on your smartphone.
